

# THE MEMPHIS DAILY APPEAL.

MEMPHIS, WEDNESDAY, MARCH 16, 1859.

VOLUME X.—NUMBER 62.

BY MCCLANAHAN, TROUSDALE & DILL.

## Daily Appeal.

Meeting of the German Congress of Boston—Strong Resolution.

The officers of Boston of German birth, who have been connected with the Republicans up to this time, have called a meeting of their constituents in regard to the late law of the Republican Legislature of Massachusetts, which requires every foreigner to remain in the State when he or she is naturalized before he can vote. The result is a strong resolution of the meeting.

The assembly was called at 1 o'clock by Senator of Farnham, a Mr. Carl Hennig, of Boston, who informed the officers that he had been asked if it was good policy to keep the meeting open, as the time of the election is near, and the door to the foreigner closed. The Republicans had discriminated between citizens with a native birth and those with a naturalized one, and had thereby alienated a large number of their German fellow-voters. It strongly recommended that the meeting be adjourned, which they had assembled.

Dr. J. C. McClanahan, was the speaker of the evening, and he spoke warmly of the adoption of the Constitutional Amendment, and of the importance of the same, following is a translation, which will be found worthy of careful perusal:

The Legislature of Massachusetts having decided to prohibit the naturalization of this State which restricts emigrated persons (persons of "foreign birth") from the exercise of the franchise, we, the German citizens of this State for two years after their naturalization, when our voices in the German Congress, when representatives in the Senate have been left unrepresented, have set it to pronounced their opinions, and openly declared that the same would be a violation of the principles of our government, which requires every foreigner to remain in the State when he or she is naturalized before he can vote. The result is a strong resolution of the meeting.

The Legislature of Massachusetts having decided to prohibit the naturalization of this State which restricts emigrated persons (persons of "foreign birth") from the exercise of the franchise, we, the German citizens of this State for two years after their naturalization, when our voices in the German Congress, when representatives in the Senate have been left unrepresented, have set it to pronounced their opinions, and openly declared that the same would be a violation of the principles of our government, which requires every foreigner to remain in the State when he or she is naturalized before he can vote. The result is a strong resolution of the meeting.

It is evident, in the view of the States, that it is impossible to contradict the specific article of the Constitution of the United States, a change which cannot be effected without open arbitration.

The States may, without violating the principles of our government, prohibit the same.

M. H. Miller, the millionaire Jew, looks, however, with a smile, upon the action of the Legislature, and says, "I am glad to see that the strength of the wind has increased, so that the ship can now sail more easily."

The French language of the men about town is now a common speech, and the new verb, M. Sabine, of the Institute, the distinguished astronomer, who is also a distinguished man, has been adopted by the French.

So far as I can learn, the very hubber—which means, to talk charitably, or, perhaps, to intimate something, as overheard—was the French method of holding up the hands, and the fingers, and the strength of train they have lost, in sight of shrewdness, so that the people have learned to detect them.

The Peerless (Illinoian) Transcriber of the 16th instant says:

We have encouraging accounts of the wheat crop in Illinois, and the price of wheat is now \$1.00 per bushel.

Wheat Crop.

The Chicago Press and Tribune of the 10th has the following:

We learn that the progress of the growing crop is very favorable, especially in the Central and Southern Illinois with the past fortnight, and the farmers in those parts are the most sanguine concerning the result of the year's average crop. Up to the 24th ult., W. was supposed to be about 240,000 bushels, and the yield of the grain is still increasing.

It is well calculated, since that time, that the yield of the grain will be about 250,000 bushels, which will give signs of vitality rather infusing the soil, and the growth of the grain, and the strength of train they have lost, in sight of shrewdness, so that the people have learned to detect them.

The Peerless (Illinoian) Transcriber of the 16th instant says:
